

```
var ReportLog = require("ReportLog");

function exportMHTReport(){
    Log.Message("test Finished");

    while(Sys.WaitBrowser().Exists){
        Sys.WaitBrowser().Close();
    }

    var resultExportFile = ReportLog.exportMHTLog("WOAHOLD-001 Admin Page Holds Search and Edit");
}
```

After all the tests finished running, this script ran to export the results. It call the function `exportMHTLog`

```
/**  
@function exportLog  
@param fileName - name of the Report file get store in hard disk file  
**/  
function exportMHTLog(fileName)  
{  
  
// var pathFile = Project.Path + "Log\\Result_.mht";  
// var pathFile = Project.Path + "Log\\Result.mht";  
var pathFile = Project.Path + "Log\\Result\\" + fileName + ".mht";  
  
// var outFile = pathFile.substring(0,pathFile.length-4) + currentDateTimeString() + ".mht";  
var outFile = pathFile.substring(0,pathFile.length-4) + ".mht";  
// Log.Message("Export Log mht output to " + outFile);  
  
Log.SaveResultsAs(outFile,lsMHT); //lsXML, lsHTML  
return outFile;  
}  
  
/**  
@function
```
